OBJECTIVE

Data & Analytics professional with hands-on 1+ experience in SQL, Python, Power BI, ETL pipelines, Microsoft Fabric, and data modeling. Experienced in developing data ingestion and transformation workflows, building interactive dashboards, validating data quality, and automating reporting processes. Strong foundation in batch processing, relational databases, and cloud-based analytics with a passion for learning Azure technologies, AI-assisted development, and modern data engineering practices. Skilled at collaborating with cross-functional teams to deliver reliable, data-driven solutions.

EDUCATION

B.Tech in Information Technology (2022-2026)

SCOE, Kopergaon

CGPA: 9.06

HSC (2020-2022)

R.B.N.B. College, Shrirampur

Percentage: 61.67%

SSC (2020)

Shri J.P.V. Bhokar

Percentage: 87%

SKILLS

BI Tools	Power BI, Power Query, DAX, Dashboards, Data Modeling, RLS
Programming	Python (Pandas, NumPy, Matplotlib), SQL
Data Modeling	Star Schema, Snowflake Schema, Fact & Dimension Tables
Data Engineering	ETL Pipelines, Data Ingestion, Data Cleaning, Batch Processing, Data Transformation, Pipeline
Microsoft Fabric	OneLake, Lakehouse, Warehouse, SQL Server
Visualization	Tableau, Microsoft Excel (Pivot Tables, Power Pivot, Charts, Data Cleaning, VLOOKUP, HLOOKUP, Conditional Formatting)
Tools	Git, GitHub, Chatgpt, GitHub Copilot
Professional Skills	Problem Solving, Communication, Leadership, Team Collaboration, Adaptability

EXPERIENCE

Data Analyst - Fulltime

July 2026 – Present

Assimilate Technologies, Pune

- Created business intelligence solutions using Power BI, DAX, and SQL to monitor KPIs and improve operational performance.
- Automated reporting processes and optimized dashboard performance through efficient data modeling and transformation techniques.
- Performed ETL processes including data extraction, transformation, validation, and loading using SQL and Python to prepare high-quality datasets for reporting.

Data Analyst Intern

Feb 2026 – June 2026

Assimilate Technologies, Pune

- Worked on real-world datasets for data cleaning, transformation, and analysis using SQL and Python.
- Built interactive Power BI dashboards to visualize business insights and KPIs.
- Performed data validation and quality checks to ensure reporting accuracy.
- Created reusable SQL scripts and documented ETL workflows to improve maintainability and collaboration.

PROJECTS

Business Development Out-Licensing Performance Dashboard (Power BI)

July 2026

- Analyzed business development and out-licensing data to evaluate deal progression, licensing value, pipeline opportunities, and milestone performance
- Performed data transformation and cleansing using Power Query and implemented DAX measures for business KPIs, YTD analysis, and performance tracking.
- Applied data modeling and relationship management to create an interactive reporting solution for analyzing deals, products, regions, and BD owners.
- Built a dynamic and user-friendly Power BI dashboard to support pipeline management, performance monitoring, and data-driven decision-making.

Fleet & Waste Management Dashboard (SQL,Python,Power BI, Power Query)

Feb 2026

- Designed an end-to-end analytics solution involving data ingestion, ETL, star schema modeling, DAX calculations, and interactive reporting.
- Performed fleet performance analysis by identifying high-maintenance vehicles.
- Built inventory analytics for spare parts monitoring and procurement planning.
- Delivered insights to improve operational efficiency and preventive maintenance.

Customer Behavior Analytics Dashboard (SQL, Microsoft Fabric, Power BI)

Dec 2025

- Designed a Star Schema data model and created DAX measures for Customer Lifetime Value (CLV), Retention Rate, Average Order Value (AOV), and Purchase Frequency.
- Performed data cleaning, transformation, and ETL processes using Power Query to ensure high-quality and reliable reporting.
- Delivered actionable insights on customer segments, buying patterns, and revenue contribution to support data-driven business decisions.
- Implemented interactive slicers, drill-through pages, bookmarks, and dynamic visualizations to enhance user experience and analysis.

Hospital Emergency Dashboard (SQL, Python,Power BI, Power Query)

Sep 2025

- Designed KPIs including Patient Count, Average Wait Time, Patient Satisfaction, and Referral Analysis.
- Applied DAX calculations to generate meaningful business insights.
- Performed data cleaning, transformation, and modeling using Power Query and Excel.
- Identified waiting time trends and admission patterns to improve hospital performance.
- Implemented slicers and drill-through functionality for interactive reporting.

CERTIFICATIONS

- Microsoft Certified: Fabric Analytics Engineer Associate (Dp 600)
- Oracle: Database Programming with SQL
- Google: Data Analytics Professional Certificate
- Cisco Networking Academy: Data Analytics Essentials
- Microsoft : Microsoft Certified: Fabric Data Engineer Associate (Dp 700)
